## EmVista Enterprise Edition

EmVista Enterprise Edition is designed for multiple use case communications environments requiring custom features and advanced engineering design and installation support. An EmVista Enterprise installation supports multiple attendants on any combination of workstations and EmVista Satellite Stations in disparate locations and controls arbitrarily large networks interconnecting a collection of virtually any devices that can either receive or transmit audio, including PBXes, radio and public address systems, and legacy analog equipment – as well as VoIP phones. All audio through EmVista is recorded.

EmVista Enterprise Edition also has the capability of correlating video streams provided by a number of third party CCTV systems with audio devices under its purview, as well as providing native video services with Emcom phones.

### Features

- **Endpoints:** Emcom and other VoIP products; analog phones and/or PSTN (with approved gateway), radio, public address
- **Video:** Emcom and third-party systems (Genetec and custom systems)
- **Audio Services:** call and conference management, recording playback and export, server failover
- **Administrative Services:** endpoint programming and testing, diagnostics and fault detection, reports, PACT (SMS, email, phone call)
- **Database Redundancy:** full redundancy using SQL Server Availability Groups
